PROBLEM DEFINITION OF PROJECT

The ABCD mall is situated in sub-urban part of Mumbai and was opened by ABCD Developers Pvt Ltd. The 250,000 sq ft mall with a frontage of 700 ft. It was designed by Cooper and their partners. R Mall is a 4-storeyed air-conditioned mall covering an area of approximately 80,000 sq ft on each floor. The site includes a 7 level car parking facility. The owner of the mall wants to develop the website of their mall in order to advertise its construction and features.

The website will have a home page for displaying the mall's images and relevant information and can be used to help users navigate the sites and explore features. There will be separated modules for admin and client features. The website allow admin to login then view and edit the mall's data, manage gallery section, view feedback, etc. Clients are allowed to view mall's data, buy movie tickets, provide feedback, etc.

		View Contact Details	This module allows Clients to view the contact details of the mall for any inquiries or assistance
		View Shopping Centers	This module allows Clients to view the list of shopping centers available in the mall and explore information about the items they offer
		View Food Courts	This module allows Clients to view the menu of food items available at various counters in the food court
		Send Feedback	This module allows Clients to provide feedback regarding their experience or suggestions for improvement
		View Gallery	This module allows Clients to view the gallery section, which includes images of top-brand items and food images

III. Use case description

1. Login, logout: This module allows Admin to access the website by logging in with valid credentials to manage system features and logout from system

- Login:

- Purpose: This function allows Admin to log in the website
- Inputs: Email, password
- Outputs: Authorized and direct Admin to corresponding page

- Logout:

- Purpose: This function allows Admin to log out
- Inputs:
- Outputs: Logout and direct Admin to homepage

2. Manage Shopping Centers: This module allows Admin to manage information about shopping centers, including add, update, delete and view list of shopping centers. Admin can also manage the list of items available in the shopping centers including add, update, delete and view list of items available

PROJECT PLAN

I. Project Details

1. Name of the Client: ABCD Mall Online

2. Date of Project Plan: 19/11/2024 - 19/12/2024

3. Project Vision/Objectives:

- Objectives:
 - Provide an efficient and convenient online shopping platform, search, and purchase products from multiple vendors
 - Ensure a quick, secure, and reliable shopping experience, enhancing customer satisfaction
- Project Vision:
 - Meet customers' shopping needs anytime, anywhere
 - Create a user-friendly and effective environment for vendors to reach potential customers
 - Promote e-commerce growth for small and medium-sized businesses

4. Scope:

- Customer:
 - View product lists, add items to the cart, and make online payments
 - Leave reviews for purchased products and services
- Admin:
 - Manage customers, vendors, and reviews
 - Generate reports and monitor platform activities
 - Control and moderate content on the platform

5. Our understanding of the client organization

6. Project Organization with Responsibilities and Authorities

No.	Member	Role	Responsibilities
1	Duc Hung Nguyen	Leader	Requirements, Design, Development, Testing, Deployment
2	Duy Nguyen	Member	Requirements, Design, Development, Testing, Deployment
3	Tem Tran Hong	Member	Requirements, Design, Development, Testing, Deployment
4	Phuc Tran Huu	Member	Requirements, Design, Development, Testing, Deployment

II. Project Initiation/Requirement Documents

- Current business processes
- List of necessary features
- Desired user interface and experience
- Security and online payment integration requirements

III. Deliverables

Prepared By:

Tem Tran Hong

Date:

25/11/2024

Approved By:

Duc Hung Nguyen

Form No. 3: Project Plan

After completing the project, the following will be handed over to the client: User Manual, Installation Guide, Source Code, Documentation.

IV. Project Dependencies

The events encountered during project execution: unexpected computer errors, code consolidation without synchronization leading to non-functionality, varying progress among team members resulting in timeline discrepancies.

V. Major Project Milestones

Task name	Week 1					Week 2					Week 3					Week 4				
	M	T	W	T	F	M	T	W	T	F	M	T	W	T	F	M	T	W	T	F
Requirements																				
Design																				
Development																				
Testing																				
Deployment																				

VI. Quality Plan

- 1. Review Activities:** The project team will meet once a week to consolidate code and provide unified solutions for encountered issues
- 2. Testing Activities:** Unit test
- 3. Backup and Recovery Strategies:** Each member stores their code individually, and the team uses a common GitHub for this project to update their code after each addition, modification, or deletion. GitHub supports data backup so we can restore it when needed

Jollibee

Jollibee is a Filipino chain of fast food restaurants owned by Jollibee Foods Corporation (JFC) which serves as its flagship brand. Established in 1978 by Tony Tan Caktiong, it is the Philippines' top fast food restaurant and is among the world's fastest growing restaurants, expanding its international presence from 2014 to 2024 almost sixfold. As of January 2024, there were over 1,668 Jollibee fast-food branches across 17 countries, with restaurants in Southeast Asia, East Asia (Hong Kong and Macau), the Middle East, North America, and Europe (including Spain, Italy, and the United Kingdom). Jollibee is best known for its bestselling item, the Chickenjoy.

CODING STANDARDS DOCUMENT

I. Programming Standards

One of the fundamental aspects of maintaining a consistent and readable codebase is adhering to well-defined naming conventions. Properly chosen names for variables, functions, and classes can significantly enhance code clarity and promote effective collaboration among developers. In this project, we follow the below naming conventions:

1. Classes:

- Use PascalCase for class names
- Opt for meaningful and intuitive class names that accurately represent the entity or concept they model

2. Folder:

- Use PascalCase for folder names
- Aim for concise yet meaningful names that reflect the folder's purpose

3. Avoid Abbreviations and Acronyms:

- While brevity is important, avoid excessive use of abbreviations or acronyms
- Prioritize clarity over brevity to ensure future developers can understand the codebase without ambiguity

4. Comments and Documentation:

- Complement the chosen names with clear and concise comments to explain complex logic or intentions behind certain code sections

II. Standards for code writing styles

1. Use consistent indentation with either 4 spaces or tabs
2. Keep each line of code within 80-100 characters
3. Utilize comments to explain important, complex, or design-related parts of the code
4. Maintain one statement per line
5. Place opening braces on a new line

III. Standards for declaring Variables

1. Use camelCase for variable names
2. Choose descriptive names that convey the purpose or content of the variable
3. Avoid using single-letter variable names unless they represent loop counters
4. For constants, use uppercase letters with underscores (e.g., MAX_ITEMS, DEFAULT_TIMEOUT)

IV. Standards for Function Declarations

1. Use PascalCase for functions names
2. Choose descriptive names that convey the purpose or content of the function
3. Specify data types for each parameter

V. Other standards

Prepared By:

Duy Nguyen

Date:

02/12/2024

Approved By:

Duc Hung Nguyen

In addition to the existing programming standards, the following conventions should be adhered to when working with the project:

1. Service classes:

- Purpose: Handle common operations (e.g. hashing, mailing, generating payment URL)
- Naming convention: Use PascalCase, ending with Service (e.g., UserService, OrderService)
- Location: Place in the Services folder

2. Controller classes:

- Purpose: Handle HTTP requests and responses
- Naming Convention: Use PascalCase, ending with Controller (e.g., UserController, OrderController)
- Location: Place in the Controllers folder

3. Model classes:

- Purpose: Represent data structures and database tables
- Naming Convention: Use PascalCase (e.g., User, Order)
- Location: Place in the Models folder

4. Filter classes:

- Purpose: Intercept HTTP requests for processing (e.g., logging, authentication)
- Naming Convention: Use PascalCase, ending with Filter (e.g., AuthenticationFilter, LoggingFilter)
- Location: Place in the Filters folder
