

# **ABCD MALL WEBSITE INSTALLATION GUIDE**

## I. System composition

1. **Server:** A computer to hold project files and database
2. **Clients:** Computers or phones having web browsers connecting with the server in a LAN or via Internet

## II. System requirements

### 1. Server:

- Hardware:
  - CPU: 1.4 GHz for faster
  - RAM: 2 GB
  - Hard disk space: 20 GB
  - Graphics card: DirectX 9 or later with WDDM 1.0 driver
  - Display: 800 x 600 or higher resolution
- Software:
  - Microsoft SQL Server 2022
  - SQL Server Management Studio 19
  - SQL Server 2022 Configuration Manager
  - .NET Framework 4.8
  - Windows 10 and Visual Studio 2022 or higher (for development and debug)
  - Windwos Server 2008 and IIS 7 or higher (for release)

### 2. Clients:

- Hardware:
  - CPU: Supporting SSE3 (for computers)
- Software:
  - Web browsers (Google Chrome, Safari, Brave, Firefox, Opera, Microsoft Edge, etc. are recommended)

## III. Configuration

### 1. Server:

- You may need to modify **web.config** files in the **project's root** folder as well as **bin/app.publish** folder, according to your needs
  - weurl: URL of website, `http://localhost:59552` is default for development and debug
  - email: The email address used to sending email to customers, `plateportal@gmail.com` is default
  - password: App password of the Google account in order to sending email
  - vnp\_url: Base payment URL of VNPay
  - vnp\_api: API URL of VNPay

- vnp\_tmncode: VNPay's terminal ID
- vnp\_hashsecret: VNPay's secret key
- vnp\_version: VNPay's version
- connectionString: Database connection string, default server name is localhost and default database name is ABCDMall
- SQL Server configuration: Use SQL Server Configuration Manager
  - Enable TCP/IP protocol in SQL Server Network Configuration/Protocols for MSSQLSERVER
  - Modify the protocol's properties, set TCP Port of IPAll in IP Addresses to 1433
  - Run the SQL Server service in SQL Server Services
- 2. **Clients:** Make sure web browsers support and does not block cookies (used for CSR validation)

#### IV. Deployment

##### 1. Server (development and debug):

- Step 1: Install the database by restoring it using the **ABCDMall.bak** file or by running the **ABCMall.sql** file in the **Database** folder, you may use SQL Server Management Studio 19 for this
- Step 2: Open the project in Visual Studio 2022 and run it

##### 2. Server (release):

- Step 1: Install the database by restoring using the **ABCDMall.bak** file or by running the **ABCMall.sql** file in the **Database** folder, you may use SQL Server Management Studio 19 for this
- Step 2: Copy the contents in the **bin/app.publish** folder to the **wwwroot** folder of IIS

##### 3. **Client:** Open a web browser and connect to the website's URL
